

TRANSFORMING INTO ACTIVE PATIENT ENGAGEMENT

Empower patients at home to improve outcomes and lower costs by providing the highest level of personalized care

What is "Active" Patient Engagement?

Fitango Health's Active Patient Engagement in the Hospital at Home platform unites all stakeholders in a patient's care across the whole continuum of care. Fitango actively engages patients and their families with interactive digital health content that can be monitored over time.

Fitango's highly customizable platform enables health providers to build digital programs for any therapeutic area and all stages of disease management. With Fitango, providers and payers gain insight into their patients recovery at home, and patients are empowered to be active participants. Ultimately, patients report having better health outcomes when they are actively engaged in their healthcare journey.

The Magic Engagement Cycle

***5.3%**

Lower medical costs for patients who received enhanced decision-making support

****2.26x**

Less likely to experience depression symptoms when actively engaged

*****12.5%**

Fewer hospital readmissions due to active patient engagement

Fitango Health's Active Patient Engagement Features:

Active patient and family engagement:

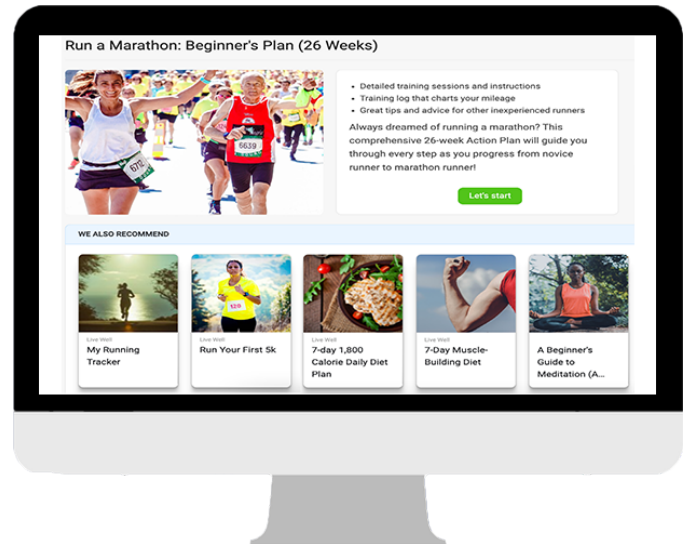

Actively engage patients and their family members with digital assets that incorporate health trackers, questionnaires, journaling, and more.

Health content management system:

Clinicians build a repository of digital assets (recovery plans, assessments, educational materials, etc.) to prescribe to patients in between appointments.

Wellness store: Patients have access to an abundance of health plans to help them reach specific health and wellness goals.

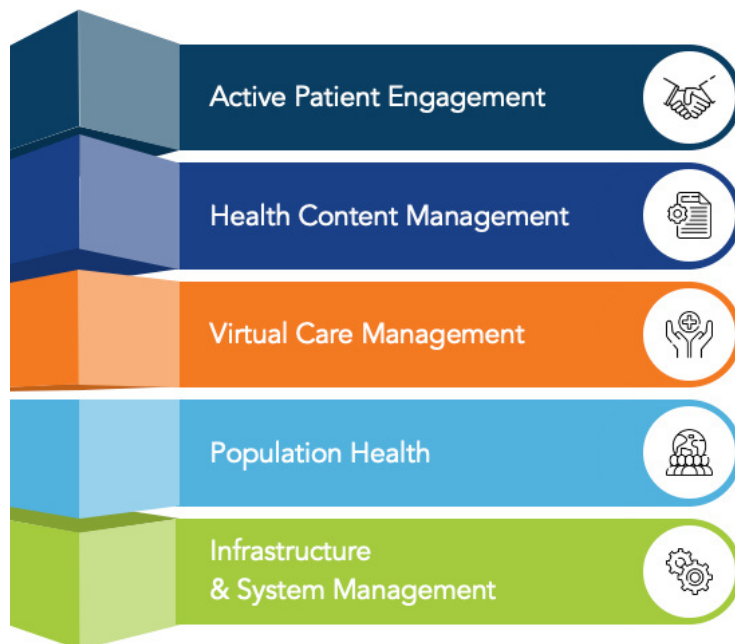

Remote patient monitoring: healthcare providers and clinical care teams gain insight to their patient's recovery at home through the ability to remotely monitor via patient reported digital assets.

Fitango's Wellness Store

Fitango's Hospital at Home Platform

Fitango provides an integrated Hospital at Home platform with unique Patient Engagement and Content Management capabilities.

Actively engage individual patients and large populations with our digital assets prescription

Build content through Fitango's rich content builder, or easily load your own

Provide treatments and use telehealth and secure messaging for real-time communication

Analyze and access cohorts or the whole population to get new insights about your patients

Customize, scale, and integrate your instance seamlessly with our API solutions
